Interneting with routers in Cisco packet Tracer

Aim: To design and configure a simple internetwork using a router in Cisco packet Tracer.

Procedure:

1. Open Cisco packet Tracer and create a new topology.
2. Add 2 routers, switches and 3-4 PCs for each network.
3. Connect PCs to switches to routers using Ethernet Cables.
4. Assign Static Ip address and subnet mask to all PCs.
5. Configure Ip addresses on routers interfaces.

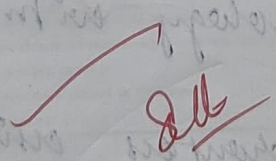

Code:

```
enable
Configure terminal
interface Fast Ethernet 0/0
IP address <Ip> <Subnet Mask>
no shut down
exit
interface Fast Ethernet 0/1
Ip address <Ip> <Subnet Mask>
no shut down
exit.
```

6. Configure gateway of each PC with Ip address of connected router interface.

7. Use simulation mode & send a PDU from one network to another.

8. Observe the packet path through the router and verify successful communication.

Result: The simple subnetwork was successfully designed & configured in Cisco packet tracer and communication between different networks.
