To study the Packet tracer tool & Installation and cisco Interface Overview.

Aim: To study the Packet tracer tool & Installation and cisco Interface Overview

a) To understand environment of CISCO Packet tracer to design simple network.

Introduction:

A simulator, as the name suggest, simulates network devices and its environment. Packet Tracer is an exciting network design, simulation & modelling tool.

1. It allows you to model complex systems without the need for dedicated equipment.
2. It helps you to practice your network configuration & troubleshooting skills via computer or an android or iOS based mobile device.
3. It is available for both the linux & window desktop environments.
4. Protocols in Packet tracer are coded to work and behave in the same way as they would on real hardware.

b) Analyse the behaviour of network devices using cisco packet tracer simulator

1. From the network component box, click and drag-and-drop the below components:
   a. 4 Generic PCs and one HUB
   b. 4 Generic PCs and one switch
2. Click on Connections:
   a. Click on copper straight-through Cable,
   b. Select one of the PC and connect it to HUB using the Cable. The link LED should glow in green, indicating that the link is up. Similarly connect remaining 3 PC to the HUB.
   c. Similarly connect 4 PCs to the switch using copper

straight-through cable.

3. Click on the PCs connected to hub, go to the Desktop tab, click on IP Configuration, and enter an IP Address and subnet mask. Here, the ~~drop~~ default gateway and DNS server information is not needed as there are only two end devices in the network.

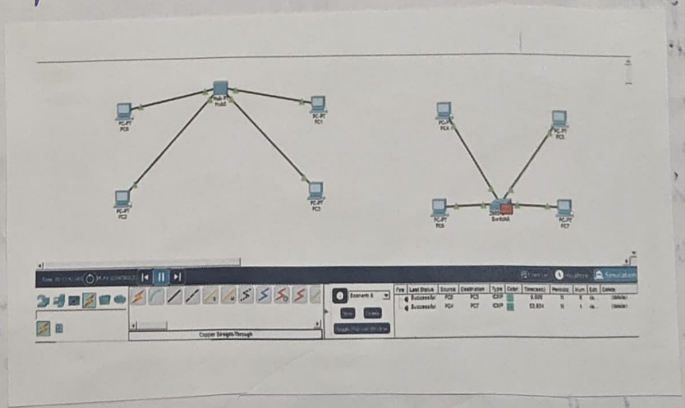

Click on the PDU (message icon) from the common tool bar,

a. Drag & Drop it on one of PC (source machine) and then drop it on another PC (destination machine) connected to the HUB.

4. Observe the flow of PDU from source PC to destination PC by selecting the Realtime mode of simulation.

5. Repeat step #3 to step #5 for the PCs connected to the switch

6. Observe how HUB and switch are forwarding the PDU and write your observation and conclusion about the behaviors of switch and HUB.

Result: Thus the behavior of ~~network~~ devices using CISCO PACKET TRACER simulation has been analyzed.
